Report Overview

Adaptive Cruise Control (ACC) is an intelligent version of the conventional cruise control system, useful in maintaining and controlling the desired vehicle speed. This system slows down and speeds up automatically to maintain the pace of the vehicle in relation to the surrounding vehicles. These systems operate using sensors and lasers to control the speed of vehicles, rather than using any satellite, infrastructure, or cooperative support from other vehicles. The main impact of the ACC is on the driver's safety since the distance is adjusted according to the traffic conditions. The overall process is achieved through a radar headway sensor, longitudinal controller, and digital signal processor.

The Asia-Pacific region is expected to contribute significantly to the growth of both BSD and ACC markets.
