Abstracts

ADC drugs, also known as antibody drug coupling agents, work by coupling small molecule drugs with antibodies through linkers to form drugs. These drugs combine the high targeting ability of antibodies with the strong killing power of chemical drugs, and are considered the most promising next-generation antibody technology. To reduce research and development costs, most ADC drug development worldwide chooses outsourcing, leveraging CDMO companies to enter clinical and market more quickly. CDMO services refer to pharmaceutical and biotechnology companies outsourcing the research and production of their drugs or biological products to professional CDMO companies. These CDMO companies provide a range of services, including but not limited to drug synthesis, chemical and biological analysis, formulation development, clinical production, and commercial production. The core of CDMO services lies in its ability to customize and specialize, which can meet the specific needs of different customers at different stages. One of the primary drivers of the ADC drug CDMO market is the increasing demand for targeted therapies, particularly in oncology. Cancer remains a leading cause of death globally, and the traditional methods of chemotherapy, while effective, often come with severe side effects that limit their use. ADCs, which combine the targeting ability of monoclonal antibodies with the potency of cytotoxic drugs, offer a more precise and effective treatment option. By delivering the toxic drug directly to cancer cells, ADCs minimize damage to healthy tissues, thereby reducing adverse effects. The demand for ADCs is expected to increase significantly due to their ability to treat a wide range of cancers, including breast cancer, leukemia, and lung cancer. As the pipeline for ADC drugs continues to expand, pharmaceutical companies are increasingly relying on CDMOs to support the development and manufacturing of these complex therapies.

The global ADC Drug CDMO Service market size was estimated at USD 2897.0 million

in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.00% during the forecast period.
