Abstracts

Additive production systems, commonly known as 3D printing or additive manufacturing, refer to technologies that create three-dimensional objects by building them layer by layer from digital models, using materials such as plastics, metals, ceramics, or composite polymers. These systems differ from traditional subtractive manufacturing methods, as they add material precisely where needed, minimizing waste and enabling the production of complex geometries that would be difficult or impossible to achieve through conventional techniques. Applications span rapid prototyping, tooling, end-use part production, and customized manufacturing across industries including aerospace, automotive, healthcare, consumer goods, and construction.

The global Additive Production Systems market size was estimated at USD 12000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
