Report Overview

Additives for wood coatings are specialized chemical compounds incorporated into wood finishes to enhance performance, durability, and application properties. These additives serve various functions, including improving UV resistance, preventing fungal growth, enhancing flow and leveling, reducing foam formation, or accelerating drying times. They can be categorized into key types such as biocides, defoamers, wetting agents, rheology modifiers, and light stabilizers, each addressing specific challenges in wood coating formulations. The demand for these additives is driven by the need for longer-lasting, eco-friendly, and high-performance wood finishes in applications like furniture, flooring, decking, and construction. Regulatory pressures toward low-VOC and sustainable formulations further influence innovation in this market, with bio-based and waterborne additives gaining traction.
