## Abstracts

An Addressable Fire Detection System is an intelligent fire alarm network where every initiating device, such as smoke detectors, heat sensors, and manual pull stations, is assigned a unique digital address on the communication loop. This sophisticated architecture allows the central Fire Alarm Control Panel (FACP) to constantly poll each device for its status and, in the event of an alarm or fault, instantly identify the precise location (e.g., "Smoke Detector #15, Office 302") and type of event. By pinpointing the exact origin of a fire or malfunction, addressable systems significantly reduce response times for emergency services and simplify maintenance and troubleshooting, making them the preferred choice for large, complex, or high-risk commercial and industrial facilities.

The global Addressable Fire Detection Systems market size was estimated at USD 800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
