Abstracts

Adhesive for metal bonding refers to a specialized class of chemical formulations designed to join metal substrates—including steel, aluminum, copper, and alloys—through adhesion and cohesion mechanisms rather than mechanical fastening. These adhesives are engineered to withstand environmental stressors such as vibration, thermal cycling, corrosion, and mechanical loads, and are available in various chemistries, including epoxies, acrylics, cyanoacrylates, silicones, and polyurethanes, each offering distinct properties like high strength, flexibility, temperature resistance, or rapid curing. They are utilized across industries such as automotive, aerospace, construction, electronics, and marine for applications ranging from structural assembly and panel bonding to sealing and repair, offering advantages over welding or riveting by distributing stress more evenly, reducing weight, and enabling the bonding of dissimilar materials or thin sections without deformation.

The global Adhesive For Metal Bonding market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
