Abstracts

Linerless labels are thermal paper media in a continuous roll format, usually with a pressure-sensitive adhesive. To produce linerless labels, it is important not only to choose the right paper, but also the right adhesive. Low-viscosity materials will penetrate the paper surface and not be able to fully crosslink. There are also some requirements for the adhesive. Materials that are too watery will affect the paper structure, wrinkle during the drying process, and cannot be used for labeling. Like liner labels, linerless labels are pressure-sensitive labels and consist of multiple layers, including adhesive and release coating. However, they do not have a release liner, but are a continuous strip of adhesive material rolled into a roll.

The global Adhesives for Linerless Label market size was estimated at USD 4311.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
