The adjustable bend catheter consists of a handle and a catheter. The catheter adopts a stainless steel braided mesh structure, with a PTFE inner membrane as the inner layer and a PEBAX plastic tube as the outer layer, and is coated with a hydrophilic coating (the coating area is 2/3 of the effective length of the tube body); the metal ring embedded in the distal end of the catheter is connected to the slider inside the handle through a metal wire, and the distal end of the catheter can be bent within a certain angle range by turning the handle drive wheel. It is suitable for peripheral blood vessels except for cardiac and intracranial blood vessels, and enters the vascular system through percutaneous puncture to establish a channel for guidewire delivery during interventional diagnosis or treatment surgery.
