Report Overview

A laparoscopic adjustable gastric band, commonly called a lap-band, A band, or LAGB, is an inflatable silicone device placed around the top portion of the stomach to treat obesity, intended to decrease food consumption. Adjustable gastric band surgery is an example of bariatric surgery designed for obese patients with a body mass index (BMI) of 40 or greater—or between 35 and 40 in cases of patients with certain comorbidities that are known to improve with weight loss, such as sleep apnea, diabetes, osteoarthritis, GERD, hypertension (high blood pressure), or metabolic syndrome, among others.

The majority of patients prefer hospitals and clinics over other healthcare units because they are closely engaged with many suppliers, reimbursement authorities, and government organizations. The purchase volume of gastric band devices will continue to increase for the next few years due to the rising adoption of bariatric surgeries in hospitals and clinics.
