## Abstracts

Adjustable slot diffusers are flexible air distribution devices designed to evenly and efficiently distribute air produced by HVAC systems into indoor spaces. Characterized by their adjustable slot openings, they allow users to modify the direction and angle of airflow to achieve optimal air distribution based on actual needs. Typically installed in ceilings or walls, these diffusers precisely control the range and intensity of airflow by altering the width and inclination angle of the slot opening. Adjustable Slot Diffusers excel in enhancing indoor comfort and reducing energy consumption. They ensure even air distribution throughout the room, minimizing temperature variations, and by precisely controlling airflow volume, they avoid energy waste due to over-ventilation. Furthermore, their flexible installation and adjustment capabilities make them adaptable to various building layouts and interior decoration needs, making them commonly used air distribution solutions in modern buildings.
