Abstracts

The market for adult resuscitation airbags, also known as manual resuscitators or bag valve masks (BVMs), focuses on portable medical devices used to provide positive pressure ventilation to patients who are not breathing or are breathing inadequately. These devices consist of a self-inflating bag, a non-rebreathing valve, and a face mask, designed to deliver oxygen or ambient air to the patient's lungs when manually compressed by a healthcare provider or first responder. They are critical in emergency medical services (EMS), hospital settings (including ICUs, emergency departments, and operating rooms), and pre-hospital care for conditions such as cardiac arrest, respiratory failure, or drug overdose. The market is driven by factors such as the rising incidence of respiratory and cardiovascular emergencies, advancements in device design (e.g., improved materials, ergonomics, and integration with monitoring systems), and growing training and preparedness initiatives among medical professionals and lay responders. Regulatory standards, including those from the FDA and ISO, ensure safety and efficacy, while competitive dynamics involve both established medical device manufacturers and emerging innovators focusing on usability, portability, and infection control features.

The global Adult Resuscitation Airbags market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
