Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Adults Wearing Dentures competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Adults Wearing Dentures production reached approximately 120 M units, with an average global market price of around US\$ 1,800 per unit. Adults Wearing Dentures refers to the population of adult individuals who use removable or fixed prosthetic dental devices (dentures) to replace missing natural teeth and restore oral function, aesthetics, and speech. Dentures can be complete (full) for individuals missing all teeth in one or both arches, or partial, designed to replace only a few missing teeth while being supported by the remaining natural teeth and gums.

Gross Profit Margin Analysis The overall gross profit margin of the adult wearable denture industry is relatively stable, typically ranging from 15% to 30%, with significant differences between different types and materials. Traditional acrylic resin dentures, due to mature manufacturing processes and lower raw material costs, generally have a gross profit margin of around 30%. High-end full-mouth or implant-supported dentures, based on digital design and 3D printing manufacturing, boast personalization, high-precision fit, and durability, resulting in gross profit margins exceeding 60%. Regionally, the profit margins of high-end dentures in Europe, America, and Japan are significantly higher than in other Asian regions, primarily due to higher medical insurance coverage, higher consumer levels, and stronger brand value. With the widespread adoption of digital denture processing centers and remote restoration solutions, the industry is gradually forming a profit structure that combines large-scale production with personalized design, further enhancing overall profitability.

Driving Factors Analysis The main driving force behind the adult denture market comes from the global aging population trend and increased awareness of oral health. According to WHO data, over 2 billion adults

worldwide have missing teeth or periodontal problems, directly driving the rigid growth in demand for denture restorations. Meanwhile, the rapid development of digital dental technology—including oral scanning, CAD/CAM design, and 3D-printed denture manufacturing—has greatly shortened the production cycle, improved fit and comfort, and promoted the popularization of high-end dentures. Furthermore, the rise of implant-supported dentures has changed the traditional denture market landscape, transforming dentures from simple replacement products into high-value-added medical devices that combine functionality and aesthetics.

The global Adults Wearing Dentures market size was estimated at USD 2160.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
