## Abstracts

Advanced hydrogel dressing is a modern medical dressing made by mixing hydrophilic polymer materials (such as hydroxymethylcellulose, gelatin, pectin, etc.) with synthetic rubber and viscous substances. Compared with traditional dressings, its most significant feature is the ability to form a moist healing environment after absorbing wound exudate, while maintaining isolation between the wound and the external environment, significantly promoting the wound healing process. After absorbing exudate, this type of dressing can expand to 12 times its original volume and has extremely strong liquid absorption ability. The global advanced hydrogel dressing market has shown a steady growth trend in recent years, mainly driven by multiple factors such as the worsening aging population, the increasing prevalence of chronic wound diseases, and the rise in medical expenditures. The market is dominated by multiple international medical giants, including Smith&Nephew, 3M, ConvaTec, Coloplast, and others. They dominate the market share with their strong research and development capabilities, comprehensive product lines, and global distribution network. Meanwhile, some specialized companies in the field of wound care, such as Covalon Technologies and Dermarite Industries, have established competitive advantages in specific niche markets through technological innovation and differentiated products. In China, local enterprises such as Winner Medical and Zhende Medical have gradually expanded their market share through cost-effectiveness advantages and localized services, and have begun to expand into the international market. The advanced hydrogel dressing industry is currently in a critical stage of technological innovation and market expansion, and will undergo profound changes and development in the next five to ten years. The development trend of product technology will revolve around key directions such as intelligent functional integration, bioactive composites, nanotechnology applications, and environmentally friendly biodegradable materials. The market size is expected to continue expanding, and functional high-end products (such as ultra-thin type, silver

containing antibacterial type, and composite type) will become the main driving force for market growth. In addition to traditional hospitals and clinics, home care, elderly care institutions, community medical centers, etc. will become important incremental markets. In addition, the growth potential of emerging markets such as India, Southeast Asia, and Latin America will gradually be unleashed. The industry has broad prospects, but competition will become increasingly fierce. Technological innovation capability, clinical value certification, and business model adaptability will become key factors for enterprise success.

The global Advanced Hydrogel Dressing market size was estimated at USD 1800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
