## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Advanced Packaging Inspection Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An Advanced Packaging Inspection System is a specialized equipment solution used in the semiconductor manufacturing process to inspect and ensure the quality, reliability, and performance of advanced packaging technologies. As semiconductor devices have become smaller, more powerful, and more complex, traditional inspection methods are no longer sufficient. Advanced packaging inspection systems are therefore critical in verifying defects, alignment, and material integrity at very fine scales. In 2024, global Advanced Packaging Inspection System sales volume reached approximately 505 units, with an average global market price of around 1,026 K US\$ per unit. The continuous push for smaller, faster, and more energy-efficient electronics in smartphones, wearables, data centers, and IoT devices is a major driver. Traditional 2D scaling is approaching physical limits, making advanced packaging methods such as Fan-Out Wafer-Level Packaging (FOWLP), System-in-Package (SiP), and 2.5D/3D integration essential. These techniques require precise inspection to detect micro-scale defects, making advanced inspection systems indispensable. Emerging technologies such as 5G connectivity, artificial intelligence (AI), and autonomous vehicles demand ultra-high-speed, low-latency, and power-efficient chips. These applications rely heavily on advanced packaging with micro-bumps, TSVs, and RDLs, all of which need sophisticated inspection to maintain yield and reliability. As these markets expand, they fuel the demand for inspection equipment that can keep pace with shrinking feature sizes and higher integration density. Semiconductor manufacturing is capital intensive, with extremely high costs for wafer fabrication and packaging. Even minor defects can lead to significant financial losses. Advanced

Packaging Inspection Systems help manufacturers improve yield, reduce rework, and prevent costly failures in later stages of production. This cost-control advantage makes inspection solutions a critical investment for semiconductor fabs and outsourced semiconductor assembly and test (OSAT) providers.

The global Advanced Packaging Inspection Systems market size was estimated at USD 518.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
