Abstracts

Advanced polymer composites are generally characterized or determined by unusually high strength fibres with unusually high stiffness, or modulus of elasticity characteristics, compared to other materials, while bound together by weaker matrices. These are termed Advanced polymer composites in comparison to the composite materials commonly in use such as reinforced concrete, or even concrete itself. The high strength fibers are also low density while occupying a large fraction of the volume. Glass fibers are prognosticated to account as a major product segment of the world advanced polymer composites market.
