Abstracts

Advanced wafer probe cards are specialized semiconductor testing devices used to electrically test integrated circuits (ICs) at the wafer level before dicing and packaging, featuring high-density microspring contacts, precise alignment mechanisms, and advanced signal routing to accommodate the shrinking geometries and increasing complexity of modern chips such as those produced at 5nm nodes and beyond. These probe cards interface between automated test equipment (ATE) and the wafer, enabling validation of electrical performance, functionality, and yield, while supporting applications ranging from memory and logic devices to RF and heterogeneous integration, with designs increasingly incorporating materials like MEMS, ceramic substrates, and sophisticated multilayer architectures to meet demands for higher bandwidth, lower contact resistance, and improved thermal stability.

The global Advanced Wafer Probe Cards market size was estimated at USD 1691.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
