Report Overview

An aeration conveyor, also known as an air slide conveyor or pneumatic gravity conveyor, is a type of conveyor that uses air to fluidize a bed of material, which then flows down a gentle slope due to gravity. Aeration conveyors are typically made up of a horizontal channel with a porous fabric bottom. Air is blown up through the fabric, creating a fluidized bed of material. The fluidized bed supports the material and allows it to flow smoothly down the channel.
