Report Overview

Aerial bundled cables (also aerial bundled conductors or simply ABC) are overhead power lines using several insulated phase conductors bundled tightly together, usually with a bare neutral conductor. This contrasts with the traditional practice of using uninsulated conductors separated by air gaps. This variation of bundled conductors utilizes the same principles as overhead power lines, except that they are closer together to the point of touching but each conductor is surrounded by an insulating layer (except for the neutral line).

The global Aerial Bundled Conductors (Abc) market size was estimated at USD 1245.62 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
