Abstracts

Aerial X-ray inspection refers to the utilization of unmanned aerial vehicles (UAVs) or drones equipped with X-ray imaging systems to perform non-destructive testing and security screening of objects or structures from an airborne perspective. This technology integrates advanced radiography capabilities with the mobility and accessibility of drones, enabling the detection of internal defects, contraband, or structural anomalies in hard-to-reach or hazardous environments such as high-rise buildings, industrial facilities, or disaster zones. By leveraging penetrating radiation, these systems can generate detailed internal images without physical contact, making them valuable for applications in infrastructure maintenance, law enforcement, border security, and industrial quality control where traditional inspection methods are impractical or unsafe.

The global Aerial X Ray Inspection market size was estimated at USD 144.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Aerial X Ray Inspection market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
