The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Aero Gas Turbine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An aero gas turbine, also known as an aeroderivative gas turbine, is a high-efficiency, lightweight gas turbine originally developed for aircraft propulsion and later adapted for industrial, marine, and power generation applications. These turbines are derived from aviation jet engines, featuring a compact design, high power-to-weight ratio, and rapid startup capabilities. Compared to heavy-frame industrial gas turbines, aero gas turbines operate at higher rotational speeds and efficiency levels, making them ideal for applications requiring quick response times and operational flexibility. According to statistics from the SIA, since 2014, the global aerospace industry revenue scale has continued to grow. And in 2021, the global aerospace industry revenue scale was 386.4 billion US dollars, with a year-on-year increase of 4.1%. In 2021, the satellite industry accounted for 72% of the aerospace industry; Non-satellite industry accounted for 27%. According to statistics, in 2022, 186 orbital launches were carried out worldwide, with 178 successes, 1 partial success, and 7 failures. And the complete success rate was 95.7%. There were 8 countries carried out space launch activities, sending a total of 2497 payloads and 24 astronauts into orbit. In 2022, there were 27 serial launch vehicles carried out space launches.

The global Aero Gas Turbine market size was estimated at USD 653.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
