### Report Overview

The aero mechanical conveyor is one of the most efficient methods of conveying materials in terms of its dust-free and clean handling properties. The AMC is a tubular design in which a wire rope assembly with evenly spaced polyurethane discs move at high speed. The rope assembly runs in specially designed sprockets at each end of the conveyor. The action of the rope assembly travelling at high speed creates an air stream running at the same velocity. As the material is fed into the airstream, it is fluidized and conveyed to the outlet where it is centrifugally ejected. This type of conveyor is designed and custom-built for the product to be conveyed and is ideally suited to meet a variety of applications in many industries.
