## Abstracts

Aerobic Treatment Units (ATUs) are advanced on-site wastewater treatment systems that utilize aerobic bacteria?microorganisms that require oxygen?to break down organic matter and contaminants in sewage more efficiently and rapidly than traditional anaerobic septic systems. These systems typically consist of a pretreatment tank, an aeration chamber where air is pumped in to stimulate bacterial activity, and a settling or disinfection compartment to further purify the effluent before it is discharged, often achieving a higher quality of treated wastewater that can be reused for irrigation or safely released into the environment, making them particularly suitable for areas with high water tables, poor soil conditions, or stringent environmental regulations.

The global Aerobic Treatment Units market size was estimated at USD 128.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.35% during the forecast period.
