Report Overview:

Aerogel blanket is a flexible, high-efficiency thermal insulation felt that combines nano-aerogel with inorganic fibers and is specially used for power battery modules. The main characteristics of Aerogel felt are low thermal conductivity, and the thermal insulation effect is 2 to 5 times that of traditional insulation materials, which can effectively reduce the thickness of the insulation layer. Secondly, Aerogel felt is relatively hydrophobic, which can effectively prevent moisture from entering the inside of the battery core. ; In addition, Aerogel felt is light and easy to cut, which greatly reduces transportation, installation and use costs. SiO₂ Aerogel felt composite material is reinforced by introducing pre-oxidized fiber filaments, glass fiber, ceramic fiber, carbon fiber and other base materials into the SiO₂ Aerogel manufacturing process. After die-cutting, coating and other processing processes, it is finally made into the battery core. used during the period. Processing and coating mainly prevents fiber dust from falling from the Aerogel product during vehicle driving.

The Global Aerogel Blanket for EV Market Size was estimated at USD 185.04 million in 2023 and is projected to reach USD 992.28 million by 2029, exhibiting a CAGR of 32.30% during the forecast period.
