Abstracts

Aerogel insulation mats represent a class of high-performance thermal insulation materials composed of a solid matrix derived from aerogels?highly porous, ultralight substances created by replacing the liquid component of a gel with gas, resulting in a structure with extremely low thermal conductivity. These mats typically integrate aerogel particles or blankets within a fiber matrix or fabric carrier to enhance durability, flexibility, and ease of installation while maintaining the material?s exceptional insulating properties, such as minimal thickness for a given R-value, hydrophobicity, and fire resistance. Designed for demanding applications where space, weight, or extreme conditions are constraints, they are used in industries including construction, oil and gas, aerospace, automotive, and apparel, offering superior performance compared to traditional insulation like fiberglass or foam.

The global Aerogel Insulation Mat market size was estimated at USD 420.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
