## Abstracts

Aerogel thermal insulation slurry is a type of coating that contains aerogel as its primary component. With aerogel serving as the main thermal insulation material, this coating is formulated by adding appropriate binders, additives, and other components to enable easy application onto various substrate surfaces, forming a thermal insulation layer. Aerogel itself is a material with a nano-porous structure, characterized by a high porosity (typically ranging from 90% to 99.8%). The air within these pores remains stationary, and heat conduction primarily occurs through the solid framework. The low solid content of aerogel results in extremely low thermal conductivity, thus imparting exceptional thermal insulation properties to the aerogel-based thermal insulation coating. Additionally, being in a coating form allows it to adapt to surfaces of various shapes and materials, providing a convenient solution for thermal insulation.

The global Aerogel Thermal Insulation Slurry market size was estimated at USD 472.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
