## Abstracts

Aerogel, also known as xerogel, is a gel obtained by reacting a chemical solution to form a sol and then gelling. The solvent in the gel is removed to obtain a spatial network structure filled with gas, and the appearance is Solid-like porous material with very low density (close to air density). Aerogels have ultra-light, low-density, nano-pores, and are characterized by ultra-fine honeycomb pore size and porous structure, which are composed of interconnected polymer chains. It is usually less than 100 nm, and the aerogel particle size is usually less than 20 nm. It can be made of inorganic materials (such as silica, alumina, etc.), organic materials (such as polyethylene glycol, carbon, etc.), or mixed materials (such as gel glass, etc.). At present, silicon-based aerogels are mainly used in the market. The core manufacturers in global Aerogel market are Aspen, IBIH, Cabot ,etc, accounting for 40% market share.
