Report Overview

Aeromedical transport and evacuation services refer to the transportation of patients by air for medical purposes, often in emergency situations where ground transportation is not feasible or timely enough. These services are typically provided by specialized aircraft equipped with medical equipment and staffed by trained medical professionals. Aeromedical transport plays a crucial role in ensuring that patients receive timely and specialized medical care, especially in remote areas or during natural disasters. The demand for aeromedical transport services has been steadily increasing due to the growing need for rapid and efficient medical evacuation, particularly in regions with limited access to advanced healthcare facilities.
