## Abstracts

An aeroponic system is a type of soilless agriculture where plants are grown in an air or mist environment without the use of soil or an aggregate medium like sand or gravel. Instead of using soil to provide nutrients, aeroponics relies on nutrient-rich water that is delivered in the form of a fine mist or spray to the plant roots. The plants are typically suspended in air, and the roots are exposed to this mist, which provides water, oxygen, and nutrients necessary for growth.

The global Aeroponic System market size was estimated at USD 1500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
