Report Overview

Aerosol cans usually have aluminium-finish or steel, coated with different alloys. Coatings are usually applied to the cans before they're moulded, to single or double-sided depending on what product they will hold. Aerosol can coatings are done to make cans more durable, resistant to heat and scratches, and also to sustain the material inside them. They also make the cans look more attractive and indicate an aesthetic appeal. Coatings usually contain additives like hydrochloric acid and pigments to make them less adherent and more vivid in appearances.
