Report Overview

Aerosol is a type of dispensing system which creates an aerosol mist of liquid particles. This is used with a can or bottle that contains a payload and propellant under pressure. When the container's valve is opened, the payload is forced out of a small hole and emerges as an aerosol or mist.

The market for aerosols in Europe registered a share of over 32% of the demand volume in 2015 on account of growing consumption of personal care products, particularly in Germany, Spain, Italy, France, and UK. However, the presence of stringent regulations to limit VOC emissions including European Commissions' VOC Solvents Emissions Directive is expected to restrict market growth.

Increasing demand for personal care products, particularly among the male population in the UK is expected to drive demand for hair sprays, conditioners, and dry shampoos. In addition, increasing demand for male grooming products, particularly among males in the age group 18-24 in the UK, on account of lifestyle changes is likely to propel the market growth.

The industry in Central and South America is likely to be driven by the consumption of aerosol based products primarily in Brazil and Argentina. In addition, growing affinity of the consumers towards the use of advanced cosmetic products is expected to emerge as the primary growth driver over the next nine years.

The Global Aerosol Market Size was estimated at USD 49664.57 million in 2021 and is projected to reach USD 62337.44 million by 2028, exhibiting a CAGR of 3.30% during

the forecast period.
