Abstracts

Aerosol test equipment refers to a set of specialized tools and devices used to generate, measure, and analyze aerosols, which are tiny airborne particles or droplets suspended in a gas (usually air). This equipment is commonly used in various scientific, industrial, environmental, and healthcare applications to study aerosol behavior, characterize particles, and evaluate air quality. The current state of aerosol testing equipment has been evolving due to the importance of monitoring and researching aerosols (tiny solid or liquid particles in the air) in a variety of fields, including environmental sciences, healthcare, industrial process control, air quality monitoring, and more. Aerosol testing equipment is increasingly focusing on the accurate measurement of particle size. A new generation of particle size measurement instruments uses advanced optical and laser technology to more accurately determine the size distribution of aerosol particles, including those on the nanoscale. For applications that require real-time monitoring of aerosol concentration and composition, more devices are emerging that can provide instantaneous data. This is critical for responding to environmental pollution events or outbreaks. The new generation of aerosol testing equipment is often multifunctional and can measure multiple parameters, such as particle size, concentration, chemical composition, etc. This makes the equipment more versatile and suitable for multiple applications. In summary, the field of aerosol testing equipment is constantly evolving and innovating to meet the needs of a growing number of fields for aerosol monitoring and research. The development of such equipment contributes to a better understanding of the impact of aerosols in the environment, health and industrial processes, and supports scientific research and policy development in related fields.

The global Aerosol Test Equipment market size was estimated at USD 1364.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50%

during the forecast period.
