## Abstracts

The development of nanotechnology has led to improved film and coating solutions to protect the interior of aircraft. Film products are designed to be durable, lightweight and easy to clean, and can resist flame, chemicals, moisture or wear. Therefore, film products should be an essential element in the plan to prolong the internal life of the aircraft and improve the overall function. Aerospace assembly film is a special film material that is used in the manufacturing and assembly process of aircraft and other aircraft. Such films are typically made of composite materials or polymers and are lightweight, high-strength, and corrosion-resistant. Aerospace assembly membranes are commonly used for exterior covering, structural reinforcement, and weight reduction of aircraft. They can also be used as thermal insulation and protective materials for aircraft, as well as to provide aerodynamic shape and appearance. In aerospace manufacturing, assembly membranes often need to be used with special structural adhesives to ensure a strong bond of the material and the robustness of the aircraft structure.

The global Aerospace Assembly Film market size was estimated at USD 357.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
