Abstracts

Aerospace extrusions refer to profiles that are produced through the extrusion process for use in the aerospace industry. In this manufacturing method, materials such as high-strength aluminum alloys, titanium alloys, and other specialty metals are forced through specifically designed dies to obtain precise cross-sectional shapes. These extrusions serve as crucial components, including structural elements like fuselage frames, wing spars, and various tubing for fluid systems, which must adhere to the rigorous demands of aerospace applications regarding strength, lightweight design, durability under extreme temperatures and pressures, and resistance to corrosion, all to ensure the safety and optimal performance of aircraft and spacecraft.

The global Aerospace Extrusions market size was estimated at USD 2091.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
