Abstracts

For aircrafts, fire breakout is one of the most dangerous incidents. By using the right fire retardant that is Fire, Smoke, and Toxicity (FST) resistant on honeycomb panels for edge close out, insert bonding, or potting, aircraft OEM and MRO manufacturers can better protect their aircraft. Aerospace flame retardant is a special chemical used in the aerospace industry that has the ability to stop the spread of flames. These flame retardants are commonly used in the building blocks and materials of aircraft, rockets, space shuttles, and other aerospace equipment to improve their fire safety performance. Flame retardants can slow the spread of flames and reduce the rate at which materials burn, providing more time for evacuation and extinguishing in the event of a fire to protect people and equipment.

The global Aerospace Fire Retardants market size was estimated at USD 669.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
