Abstracts

Aerospace Inconel blisks are single-piece integrally bladed rotors manufactured from high-performance nickel-based superalloys, primarily Inconel 718 and Inconel 625, designed for extreme operating conditions in jet engines and gas turbines. These components combine the traditional separate disk and blades into a monolithic structure, offering significant advantages in weight reduction, aerodynamic efficiency, and mechanical integrity by eliminating joints and fasteners that are potential failure points. The manufacturing process is highly complex, typically involving advanced techniques such as 5-axis CNC milling, precision forging, or emerging methods like additive manufacturing (e.g., powder bed fusion), followed by extensive post-processing including heat treatment, surface finishing, and non-destructive testing to meet stringent aerospace standards for performance, durability, and resistance to high temperatures, corrosion, and fatigue.

The global Aerospace Inconel Blisk market size was estimated at USD 1850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
