Abstracts

Aerospace thermoplastics refer to a class of high-performance polymers that are specifically engineered to meet the demanding requirements of the aerospace industry, including exceptional strength-to-weight ratios, resistance to extreme temperatures, flame retardancy, low smoke emission, and chemical stability; these materials, which include polyetheretherketone (PEEK), polyphenylene sulfide (PPS), polyetherimide (PEI), and thermoplastic composites reinforced with carbon or glass fibers, are increasingly used to replace traditional metals and thermosets in applications such as aircraft interiors, structural components, engine parts, and electrical systems due to their advantages in weight reduction, durability, manufacturability through processes like injection molding and automated fiber placement, and potential for recycling compared to thermoset alternatives.

The global Aerospace Thermoplastics market size was estimated at USD 4970.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
