Abstracts

Aesthetic lift threads represent a non-surgical cosmetic procedure involving the insertion of biodegradable sutures?typically composed of materials such as polydioxanone (PDO), poly-L-lactic acid (PLLA), or polycaprolactone (PCL)?beneath the skin?s surface to mechanically lift, reposition, and tighten sagging tissues, particularly in the face, neck, and jowl areas. These threads may be smooth, barbed, or cone-shaped to enhance tissue grip and stimulate neocollagenesis through controlled inflammatory responses, resulting in gradual collagen remodeling and sustained improvements in skin texture and firmness even after the threads dissolve.
