Abstracts

Agarwood, aloeswood or gharuwood is a fragrant dark resinous wood used in incense, perfume, and small carvings. It is formed in the heartwood of aquilaria trees when they become infected with a type of mould (*Phialophora parasitica*). Prior to infection, the heartwood is odourless, relatively light and pale coloured; however, as the infection progresses, the tree produces a dark aromatic resin, called aloes or agar (not to be confused with the edible, algae-derived agar) as well as gaharu, jinko, oud, or oodh (not to be confused with bukkhoor), in response to the attack, which results in a very dense, dark, resin-embedded heartwood. The resin-embedded wood is valued in Arabic-middle eastern culture for its distinctive fragrance, and thus is used for incense and perfumes. The aromatic qualities of agarwood are influenced by the species, geographic location, its branch, trunk and root origin, length of time since infection, and methods of harvesting and processing. The global agarwoods market refers to the industry involved in the production, trade, and consumption of agarwood and its related products. Here are some key points about the global agarwoods market:

Market Size and Growth: The agarwoods market has been experiencing steady growth in recent years due to increasing demand for luxury fragrances, traditional medicines, and spiritual products. The market size is influenced by factors such as supply and demand dynamics, cultural preferences, and regulatory frameworks.

Regional Market Dynamics: Agarwood-producing countries in Southeast Asia, such as Cambodia, Indonesia, Malaysia, and Vietnam, are major players in the global agarwoods market. These countries have a long-standing tradition of agarwood usage and have established supply chains catering to domestic and international markets. Other regions, including the Middle East and Western countries, also contribute to market growth through consumption and trade.

Product Segmentation: The agarwoods market offers diverse products to cater to various industries and consumer preferences. These include raw agarwood logs, chips, powder, essential oil, incense sticks, perfumes, cosmetics, and medicinal products.

Each product segment has its unique market dynamics, pricing, and distribution channels. **Demand Drivers:** The demand for agarwood and its products is driven by various factors. The growing popularity of luxury fragrances, exotic ingredients in personal care products, aromatherapy, and holistic wellness practices contribute to the increasing demand. Additionally, the cultural significance associated with agarwood in religious ceremonies and traditional medicine practices fuels the market demand. **Sustainability and Regulations:** The agarwoods market faces challenges related to sustainability and conservation. Due to overharvesting and illegal logging, certain agarwood species are endangered or protected under international agreements such as the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). Sustainable cultivation practices and certification programs are being promoted to ensure responsible sourcing and protect the long-term viability of agarwood-producing species. **Market Trends:** The global agarwoods market is influenced by evolving consumer preferences. There is a growing focus on natural and organic products, which has led to increased demand for sustainably sourced and ethically produced agarwood products. Furthermore, innovations in processing techniques, product formulations, and packaging contribute to market trends and create opportunities for market players.
