### Report Overview

Age-related Macular Degeneration (AMD) is a progressive eye condition that affects the macula, the central part of the retina responsible for sharp, central vision. It is the leading cause of vision loss in people over the age of 50 in developed countries. AMD can be classified into two types: dry AMD, which involves the gradual breakdown of light-sensitive cells in the macula, and wet AMD, which is characterized by the growth of abnormal blood vessels beneath the macula that leak blood and fluid, causing rapid and severe vision loss. The condition can significantly impact a person's quality of life by impairing their ability to read, drive, recognize faces, and perform daily tasks.

The market for Age-related Macular Degeneration is being primarily driven by the aging population worldwide, as the prevalence of AMD increases with age. In addition, lifestyle factors such as smoking, poor diet, and lack of exercise have been linked to an increased risk of developing AMD, further fueling the market growth. Technological advancements in diagnostic tools and treatment options, such as anti-VEGF drugs for wet AMD, have also contributed to the expansion of the market. Moreover, the rising awareness about the importance of regular eye check-ups and early detection of AMD has led to an increase in the demand for preventive eye care services and products. Overall, the market for AMD is expected to continue growing as the aging population expands and as research and development efforts lead to more effective treatment options.
