Report Overview

AGM (Absorbent Glass Mat) batteries are a type of lead-acid battery that uses a fiberglass mat separator to absorb and hold the electrolyte solution, eliminating the need for a free-flowing liquid electrolyte. This design enhances durability, reduces spillage, and allows for higher power density compared to traditional flooded lead-acid batteries. AGM batteries are known for their deep-cycle capabilities, fast recharge rates, and resistance to vibration, making them ideal for applications requiring reliable power in demanding conditions, such as automotive start-stop systems, marine and RV use, renewable energy storage, and backup power solutions. Their maintenance-free operation and longer lifespan have contributed to their growing adoption across industries where performance and reliability are critical. The market for AGM batteries is driven by increasing demand for energy-efficient and high-performance power storage solutions, particularly in the automotive sector, where advanced electrical systems and hybrid vehicles rely on their superior performance. Additionally, the rise in renewable energy installations and off-grid power systems has further bolstered demand, positioning AGM batteries as a key player in the energy storage market.

The global Agm Batteries market size was estimated at USD 1201.82 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
