Report Overview

Pesticide adjuvant and pesticide mixture, can greatly improve the toxicity and efficacy of pesticides.

The action mechanism of pesticide adjuvants is mainly to inhibit or weaken the detoxification and anti-pesticide effects of the target (pests, weeds, bacteria, etc.) on the pesticide activity, delay the metabolic rate of the agent in the control object, and thus increase the biological control effect.

Adjuvants is inactive, but with the corresponding pesticide combination, can significantly improve its wettability, distribution, dispersion, retention, and penetration performance, reduce the spray solution (air) drift with the wind, prevent or reduce the damage to the adjacent sensitive crops and so on, to liquid in foliar spreading and adhesion, reduce the UV decomposition of active ingredients in pesticide formulation, prolong the efficacy of the period of validity, improve its biological activity, reduce dosage, reduce the cost, the purpose of protecting the ecological environment.

A good adjuvants can not only improve the control effect of pesticides several times, dozens of times, but also delay the generation of resistance, prolong the life of pesticide varieties.

The basic composition of pesticide adjuvants is organosilicone polyoxyethylene ether compound, which has low surface tension, good performance, permeability and emulsification dispersibility.

It is soluble in methanol, isopropanol, acetone, xylene and dichloromethane, and can be dispersed in water.

In conclusion, agricultural adjuvants has no biological activity by itself, but can improve the efficacy of pesticide when mixed with other pesticides
