Abstracts

Agricultural antibacterials refer to a specialized class of antimicrobial agents used in farming and livestock production to prevent, control, or treat bacterial infections in crops and animals, thereby enhancing yield, quality, and overall agricultural productivity. These products encompass a wide range of formulations, including antibiotics, bactericides, and disinfectants, applied through methods such as foliar sprays, soil treatments, feed additives, or water sanitation systems. Their primary functions include managing plant diseases like bacterial blight or spot, preventing zoonotic transmissions, improving animal health and growth rates, and reducing spoilage during storage and transport. However, their use is heavily scrutinized due to concerns about antimicrobial resistance (AMR), environmental contamination, and regulatory pressures aimed at promoting sustainable alternatives and responsible application practices.

The global Agricultural Antibacterials market size was estimated at USD 3100.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
