Abstracts

Agricultural boron is a trace element that is essential for plant growth and development. It can promote cell elongation and tissue differentiation, enhance important physiological functions of crops, and improve product quality and yield. Boron can affect the activity of plant auxin, participate in the differentiation of xylem vessels, strengthen the complexation with phenolic compounds, and thus improve the stress resistance of crops and promote good root development. Its advantage is that the appropriate supply of boron can ensure luxuriant plant growth, plump grains, developed root systems, and guaranteed harvests, which is of great significance for improving agricultural production levels and crop quality.

The global Agricultural Boron market size was estimated at USD 849.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
