Abstracts

Agricultural silage films are specialized plastic coverings used in the preservation of forage crops such as corn, grass, and alfalfa through the process of anaerobic fermentation. These films, typically made from polyethylene and often enhanced with additives for UV resistance, strength, and barrier properties, are designed to create an airtight seal around silage bales or piles. This seal prevents oxygen exposure, inhibits spoilage, and maintains nutritional quality, making them essential tools for efficient feed management in livestock farming. Available in various forms?including stretch wrap films for round bales, sheet films for bunker silos, and oxygen barrier films for enhanced preservation?they contribute directly to reducing waste, improving feed efficiency, and supporting year-round animal nutrition.

The global Agricultural Silage Films market size was estimated at USD 3425.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
