Abstracts

Agricultural spray oil is a specialized horticultural and agricultural product formulated from highly refined petroleum-based or plant-derived oils, designed to be emulsified in water and applied as a spray to control pests, mites, and certain fungal diseases on crops, orchards, and ornamental plants. These oils function primarily through suffocation?coating and blocking the spiracles of insects and mites?or by disrupting cell membranes of pathogens, offering a mechanical mode of action that minimizes the risk of pesticide resistance. Key characteristics include a narrow distillation range to ensure phytotoxicity is minimized, high purity to avoid plant damage, and compatibility with integrated pest management (IPM) programs. They are valued for their low environmental persistence, minimal impact on beneficial insects when properly applied, and suitability for organic farming when derived from botanical sources.

The global Agricultural Spray Oil market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
