Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Agriculture Compost competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Agriculture Compost production reached approximately 10 million tons, with an average global market price of around US\$ 618 per ton. Agriculture compost is a stable, humus-rich soil amendment or organic fertilizer created through the controlled biological decomposition of organic waste materials such as agricultural by-products, plant and animal residues, and food scraps. This process typically occurs under aerobic conditions, where microorganisms (bacteria, fungi, etc.) break down the organic matter. The process generates heat, which helps to kill pathogens and weed seeds. The resulting compost is a valuable resource that can significantly improve soil structure, increase soil fertility, and enhance crop yields while reducing the reliance on chemical fertilizers.

The global Agriculture Compost market size was estimated at USD 6185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
