agricultural crop adjuvant, often referred to simply as a "crop adjuvant," is a type of agricultural chemical or formulation added to pesticide, herbicide, or fungicide sprays to enhance their effectiveness and improve their performance during application on crops. Crop adjuvants are not meant to control pests or diseases directly; instead, they are used to modify the characteristics of the pesticide solution to optimize its performance and increase its efficacy. With the growing demand for food production and the need to protect crops from pests and diseases, there is an increasing focus on improving the efficiency of pesticide application. Crop adjuvants play a crucial role in optimizing pesticide performance, ensuring better coverage, and reducing wastage.
