### Report Overview:

Agriculture genomics is the application of genomics in agriculture to improve the productivity and sustainability in crop and livestock production. With the combination of traditional and high-throughput sequencing platforms, there has been a tremendous increase in genomic resources available, including expressed sequence tags (ESTs), BAC end sequence, genetic sequence polymorphisms, gene expression profiling, whole-genome (re)sequencing, and genome-wide association studies. Given the emergence of genomic sequencing and expansion of bioinformatic tools, we are shifting from single gene study to whole-genome analysis, which offers a broader view of how all genes work together.

The Global Agriculture Genomics Market Size was estimated at USD 5139.30 million in 2023 and is projected to reach USD 7456.83 million by 2029, exhibiting a CAGR of 6.40% during the forecast period.
