Report Overview

An agricultural robot is a robot deployed for agricultural purposes. Fruit picking robots, driverless tractor / sprayers, and sheep shearing robots are designed to replace human labor. In most cases, a lot of factors have to be considered (e.g., the size and color of the fruit to be picked) before the commencement of a task. Robots can be used for other horticultural tasks such as pruning, weeding, spraying and monitoring. Robots can also be used in livestock applications (livestock robotics) such as automatic milking, washing and castrating. Robots like these have many benefits for the agricultural industry, including a higher quality of fresh produce, lower production costs, and a decreased need for manual labor.

The global Agriculture Robot market size was estimated at USD 6395 million in 2023 and is projected to reach USD 63705.47 million by 2032, exhibiting a CAGR of 29.10% during the forecast period.

North America Agriculture Robot market size was estimated at USD 2601.30 million in 2023, at a CAGR of 24.94% during the forecast period of 2024 through 2032.
