Abstracts

The market for Automated Guided Vehicles (AGVs) and delivery robots encompasses a range of autonomous or semi-autonomous systems designed to transport goods, materials, or products with minimal human intervention in industrial, commercial, and last-mile delivery settings. AGVs are primarily used in structured environments such as warehouses, manufacturing facilities, and logistics centers for tasks like material handling, inventory transport, and assembly line support, often following predefined paths or utilizing navigation technologies like lasers, magnets, or vision systems. In contrast, delivery robots are typically designed for unstructured or semi-structured outdoor and indoor environments, such as urban sidewalks, corporate campuses, hospitals, or hotels, focusing on last-mile parcel, food, or medical supply delivery using sensors, cameras, and AI for obstacle avoidance and route optimization. Both segments leverage advancements in robotics, artificial intelligence, IoT connectivity, and battery technology to improve efficiency, reduce labor costs, enhance safety, and address labor shortages, with key drivers including e-commerce growth, supply chain automation demands, and the increasing adoption of contactless solutions post-pandemic.

The global Agv And Delivery Robot market size was estimated at USD 5500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
